

Welcome to the game. This learning deck is made by the student-led company VSN (VBS Student Network). We designed this specifically to get you fully ready and confident for the **UNCO (ACCOUNTING) SA** on **09.04.2026**. We've stripped away the complex academic jargon to explain everything so simply, a 12-year-old could ace it. Let's learn the rules, memorize the cheat codes, and beat the exam.

The Golden Rule

Double-Entry Bookkeeping [Doppelte Buchführung] isn't magic. It just means that for every action in business, there is an equal reaction. Every time money moves, you must record it in two places to keep the game in balance.

The Snapshot: The Balance Sheet [Die Bilanz]

The Balance Sheet is a photograph of your business at one exact second in time. It shows what you have, and whose money you used to get it.

Assets [Aktiva]

Your Inventory. What the company actually owns.

Capital & Liabilities [Passiva]

The Funders. How you paid for the assets.

Equity [Eigenkapital]

(Your own money)

Liabilities [Fremdkapital]

(Borrowed money, like bank loans)

The Golden Math [Bilanzgleichung]

Asset Exchange [Aktivtausch]

One Asset ↑, One Asset ↓.
(e.g., Taking cash out of the bank.
Balance total stays the same).

Capital Exchange [Passivtausch]

One Liability ↑, One Liability ↓.
(e.g., Swapping a short-term loan
for a long-term one. Total stays
the same).

Balance Sheet Lengthening [Bilanzverlängerung]

Asset ↑, Liability ↑.
(e.g., Buying a machine on credit.
Total grows).

Balance Sheet Shortening [Bilanzverkürzung]

Asset ↓, Liability ↓.
(e.g., Paying off a loan with cash.
Total shrinks).

The Scoreboard: Income Statement [Die G&V]

If the Balance Sheet is a photograph, the Income Statement [Gewinn- und Verlustrechnung] is a movie. It measures your performance over a period of time to see if you won (Profit) or lost (Loss).

The Cheat Codes: Account Classes [Kontenklassen]

In Austria, every type of money movement has a specific folder, organized by the EKR (Österreichischer Einheitskontenrahmen). It's a 10-folder system.

Pro-Tip:

Takeaway: If an account starts with a 4 (like 4000), you immediately know it's a Revenue!

The Must-Know Inventory

Memorize these 6 codes. They will be in almost every single journal entry on the exam.

[2700]

Cash [Kassa]

[2800]

Bank [Bank]

[2500]

Input VAT [Vorsteuer]

[3500]

Output VAT [Umsatzsteuer]

[3500]

Output VAT [Umsatzsteuer]

[4000]

Sales Rev. [HW-Erlöse]

[5000]

Cost of Goods [HW-Einsatz]

The Master Rulebook [Buchungsregeln]

How to move your pieces. Read this table to know whether to put your entry in the Blue column or the Orange column.

Account Type	Soll (Blue)	Haben (Orange)
Active Accounts (Assets)	+	-
Passive Accounts (Liabilities)	-	+
Expenses [Aufwände]	+	•
Revenues [Erträge]	•	+

Pro-Tip:

Expenses sit on the left of the scoreboard (Soll).
Revenues sit on the right (Haben).

Impact on Your Score [Erfolgswirksamkeit]

Every move you make either helps your final score, hurts it, or does nothing at all.

Profit-Increasing

[G↑ / Erfolgserhöhend]

You earned money!

(e.g., Booking a Revenue like

[4000]).

Profit-Decreasing

[G↓ / Erfolgsmindernd]

You spent money!

(e.g., Booking an Expense like

[5000]).

Profit-Neutral

[GØ / Erfolgsneutral]

**You just moved things around
in your inventory.**

(e.g., Pulling cash from the bank

[2700] to **[2800]**.

No profit was made or lost).

Defeating the VAT Monster

Value Added Tax [Umsatzsteuer/Vorsteuer] is just money you are temporarily holding for the government. **It is never your money.**

The VAT Math & The Monthly Reset

[Die USt-Berechnung & Der Monatliche Abschluss]

The Math Hack (Small Invoices)

[Der Mathe-Hack (Kleine Rechnungen)]

Sometimes an invoice just gives you the Gross total (Net + VAT). If VAT is 20%, how do you find the exact VAT amount?
[Manchmal zeigt eine Rechnung nur den Bruttobetrag (Netto + USt). Wenn die USt 20% beträgt, wie finden Sie den genauen USt-Betrag?]

The Long Way: $\text{Gross} / 1.20 * 0.20$
[Der lange Weg: $\text{Brutto} / 1.20 * 0.20$]

The Cheat Code: Just divide the Gross by 6! ($\text{Gross} / 6 = 20\% \text{ VAT}$).
[Der Cheat-Code: Teilen Sie einfach den Bruttobetrag durch 6! ausgang! ($\text{Brutto} / 6 = 20\% \text{ USt}$).]

The Monthly Reset [USt-Zahllast]

[Der Monatliche Abschluss [USt-Zahllast]]

At the end of the month, you must combine your Vorsteuer and Umsatzsteuer into one account to see what you owe the government.
[Am Ende des Monats müssen Sie Ihre Vorsteuer und Umsatzsteuer auf einem Konto zusammenfassen, um zu sehen, was Sie dem Staat schulden.]

If Output > Input, you pay the Tax Office. If Input > Output, they pay you!
[Wenn Ausgang > Eingang, zahlen Sie an das Finanzamt. Wenn Eingang > Ausgang, zahlen sie an Sie!]

Play-by-Play: Buying vs. Selling

Scenario: You buy goods for cash.

Journal Entry

[Soll / Blue] [5000] Cost of Goods [HW-Einsatz] (Net amount)
[Soll / Blue] [2500] Input VAT [Vorsteuer] (Tax amount)
[Haben / Orange] [2700] Cash [Kassa] (Total Gross amount)

Score Impact: G↓ (Profit Decreases)

Scenario: You sell goods for cash.

Journal Entry

[Soll / Blue] [2700] Cash [Kassa] (Total Gross amount)
[Haben / Orange] [4000] Sales Rev. [HW-Erlöse] (Net amount)
[Haben / Orange] [3500] Output VAT [Umsatzsteuer] (Tax amount)

Score Impact: G↑ (Profit Increases)

Special Moves: Returns & The VIP Pass

[Sonderzüge: Warenrücksendungen & Der VIP Pass]

Move 1: Returns [Warenrücksendungen]

What if you send goods back to the supplier?

[Was passiert, wenn Sie Waren an den Lieferanten zurücksenden?]

Cheat Code: Don't panic. Just take the exact journal entry from when you bought it, and flip it in reverse. **Soll** becomes **Haben**, **Haben** becomes **Soll**.

[Der Cheat-Code: Keine Panik. Nehmen Sie einfach die exakte Buchung vom Kauf und drehen Sie sie um. Soll wird Haben, Haben wird Soll.]

Move 2: The VIP Pass [Private Entnahmen]

The owner takes cash from the register to buy a personal pizza.

[Der Eigentümer nimmt Bargeld aus der Kasse, um sich eine private Pizza zu kaufen.]

Entry: [9600] Private **[Privat] (Soll)** / [2700] Cash **[Kassa] (Haben)**

Exam Trap: This is GØ (Profit Neutral)! Taking your own money out doesn't count as a business expense on the scoreboard.

[Prüfungsfalle: Das ist GØ (Gewinnneutral)! Sich eigenes Geld herauszunehmen, zählt nicht als Geschäftsausgabe auf der Punktetafel.]

The Final Boss: Gross Profit [Bruttogewinn]

Gross profit is the ultimate indicator of whether your core game strategy is working. It measures exactly how much money you made just from buying and selling your main products, before any other distracting expenses are counted.

Example:

- You sold skateboards for **€15,000** (Revenue).
- Those skateboards originally cost you **€10,000** to buy (Cost of Goods).
- Your **Bruttogewinn** is **€5,000**.

The 09.04.2026 Exam Checklist

09.04.2026

- ☒ **The Golden Rule:** Every transaction requires a **Blue (Soll)** and **Orange (Haben)**.
- ☒ **The Math:** $\text{Assets} = \text{Equity} + \text{Liabilities}$.
- ☒ **The Matrix:** Know the 4 Account Rules (**Assets/Expenses + in Soll**; **Liabilities/Revenues + in Haben**).
- ☒ **The VAT Hack:** Divide Gross by 6 to find 20% VAT instantly.
- ☒ **The Final Boss:** $\text{Bruttogewinn} = \text{Erlöse} - \text{Einsatz}$.

You know the rules. You have the cheat codes. Go crush the exam. — Brought to you by VSN.
